

Assignment No. 7

➤ Single Page Website Design using Hash Component

1. There is menu bar which is fixed.
2. At right side of page there is one block which contains kids, men and other section where you have to use sticky position for section name.
3. Remaining part of page contains one block with image, below that block there are 4 buttons named best offers, tableware, intel, data storage. By default, one button is highlighted (as shown in image). When mouse moved on button image should be changed according to button label.
4. At the end of your window border there is scrolling piece of images displayed horizontally.
5. For menubar links you have to use hash component.

6. When you click on toys link ---content should look like---

7. Do same for other links on menubar.

All The Best..!!!!
